Nexturn Swiss-Type Lathes Turn Parts at Discovery Day 2014 Event, Elgin, IL

[Discovery Day, Elgin, IL - April 9, 2014] Absolute Machine Tools is demonstrating the Nexturn SA-32P, Swiss-type turning center, at this year's Discovery Day Event in Elgin, IL, April 9, 2014. The demo planned for this event is cutting a spherical fitting with Ø1" 1144 Stressproof Bearing Steel polished and ground. The SA-32P has a 32mm guide bushing and can hold up to 25 tools.

Nexturn products consist of guide bushing equipped machines from 12mm to 38mm capacity and non-guide bushing type machines from 20mm to 51mm capacity. In addition, turret type non-guide bushing sliding headstock machines are available in 56mm and 67mm capacities. Most models feature three different levels of sophistication to tailor a machine fit to any budget.

Nexturn uses the highest quality components to produce the best product possible such as: Fanuc controls, motors, and drives (Japan); NSK ballscrews and THK linear motion guideways (Japan); NSK and FAG bearings (Japan and Germany); KHK gears (Japan); Mayr couplings (Germany); CKD pneumatic valves (Japan); SMC pneumatic cylinders (Japan); and Daikin hydraulic systems (Japan).

Nexturn Co., Ltd., is located in South Korea and has been providing quality machine tools to Asia, Europe and the Americas for more than 13 years. Nexturn occupies a modern facility with

a capacity of building 50 machines per month. Nexturn is listed on the KOSDAQ (Korean stock market) since 2006. Absolute Machine Tools has offices in Lorain and Mason, Ohio, Livonia, Michigan, and the newest in Elgin, Illinois, plus a network of experienced machine tool distributors in the United States and Canada.
